# ELNADA IN NUMBERS

YEARS OF EXPERIENCE **+30**

ENGINEERING JUDGMENT BUILT THROUGH REAL PROJECTS, NOT THEORY

**+500**  
SUCCESSFUL PROJECTS

DELIVERED ACROSS DIVERSE SECTORS AND PROJECT ENVIROMENTS

**+5 BILLION** EGP

**PROJECT VALUE**

A PROVEN PROTFOLO OF HIGH-VALUE WORK DELEVERED ACROOS DEMANDING PROJECT ENVIROMENTS  
THREE DECADES HUNDREDS OF PROJECT BILLIONS IN DELIVERED VALUE - ALL HELD TO ONE ENGINEEING STANDARD

# ELNADA AT A GLANCE

SOME PROJECTS NEED MORE THAN EXECUTION  
THEY NEED AN ENGINEERING ANSWER

---

For more than three decades, ElNada has worked on projects where delivering the scope was only part of the challenge.

Some required complete construction from the ground up. Others demanded structural rehabilitation, industrial modifications, underground pipelines electromechanical works, or upgrades within existing facilities .

What connects them is the way we work: understand the real requirement, bring the right disciplines together, and carry the solution through to execution .

# WHO WE ARE

**ELNADA** CONTRACTING CO • **IS BUILT ON ONE PRINCIPLE**  
STRONG EXECUTION STARTS WITH SOUND ENGINEERING JUDGMENT

---

Before we mobilize a single team, we understand what the project actually needs not just what the scope says. From there, we shape the right approach, bring the right disciplines together, and carry that thinking through to the last day on site .

This is why ElNada operates across such a wide range of project types — because our method remains consistent, even when the project changes.

Different projects demand different answers. Our responsibility is to engineer the right one — and deliver it .

# A GLIMPSE INTO OUR CASE STUDIES

## SOME PROBLEMS DON'T HAVE A TEXTBOOK ANSWER WE BUILT ONE ANYWAY

---

- — In 1992 , an Egyptian sugar factory needed its turbine capacity multiplied eightfold mid-season, with no room for delay. ElNada was the only Egyptian firm invited to propose a solution, competing directly against the Czech manufacturer who built the turbine .

We re-engineered the surrounding structure, delivered at a fifth of the manufacturer's proposed cost, and had the turbine running again in 15 days — working around the clock .

### IT WASN'T THE ONLY TIME THE "OBVIOUS" ANSWER WASN'T THE RIGHT ONE

---

- A 350 MW turbine exploded at South Cairo Electricity — we rebuilt the structure to receive its replacement within a month, fully approved .
- A blocked pipeline looked like it needed full replacement — we custom-built the tooling to clear it instead .

**THESE ARE THREE. THREE ARE MORE — SEE THE TULL CASE STUDIES ON PAGE ..... 20**

## OUR DIRECTION

OTHER FIRMS GROW BY TAKING MORE PROJECTS  
WE GROW BY TAKING THE ONES ON ONE ELSE COULD FINISH

---

## OUR MISSION

We exist to understand the engineering challenge first, shape the right solution, and carry it through to execution with the same discipline, accountability, and standard — every time.

## OUR VISION

To be the name Egypt's most demanding industries call first — when the project is too complex, too critical, or too important to hand to anyone else.

# LEADERSHIP MESSAGE

WHEN EVERYTHING DEPENDS ON THE DECISION, ENGINEERING LEADS

---

Every \*aces Something valuable in Our hands — capital, time, reputation, and operations  
We treat that responsibility as the foundation Of every make

As Elnada enters its next chapter, our ambition is simple; greater responsibility broader  
sectors, and projects that demand real coordination, deeper capability, and a higher standard of  
delivery

**TRUST IS THE FOUNDATION OF OUR BUSINESS - AND THE REASON OUR RELATIONSHIPS ENDURE**

**OWNER**

*AHMED ELNADA*

# THE STANDARD BEHIND THE STRUCTURE

# ORGANIZATION & PROJECT STRUCTURE

ONE MANAGEMENT LINE. PROJECT-SPECIFIC TEAMS. CENTRALIZED SUPPORT

---

The thinking behind every project needs a structure that can carry it through — this is ours. Each project operates through a clear line of responsibility, supported by centralized functions and engineering teams assembled according to the project's scale, location, and technical requirements.

## PROJECT RESPONSIBILITY

MANAGEMENT —————> PROJECT DIRECTOR —————> PROJECT MANAGER —————> PROJECT ENGINEERS —————> SITE EXECUTION TEAMS

THE PROJECT MANAGER REMAINS RESPONSIBLE THROUGHOUT EXECUTION  
WHILE ENGINEERING AND SITE TEAMS ARE ASSIGNED ACCORDING TO THE REQUIREMENTS OF EACH PROJECT

## CENTRALIZED PROJECT SUPPORT

ENGINEERING TECHNICAL OFFICE  
ELECTRICAL ENGINEERING  
PROCUREMENT & INVENTORY  
FINANCE  
ADMINISTRATION  
HUMAN RESOURCES  
FINISHING SUPPORT

## HANDOVER

PROJECT DIRECTOR + PROJECT MANAGER

A FIXED LINE OF ACCOUNTABILITY , WITH TEAMS THAT SCALE AROUND THE PROJECT

# SECTORS WE SERVE

## ENGINEERING ACROSS DIFFERENT OPERATING ENVIRONMENTS

---

ELNADA WORKS ACROSS SECTORS WITH DIFFERENT TECHNICAL , OPERATIONAL ,AND PRJOECT REQUIREMENTS  
ADAPTING ITS ENGINEERING AND DELIVERY APPROACH TO THE REALITIES OF EACH ENVIROMENT

### OIL, GAS & ENERGY

Projects supporting oil, gas, pipeline, power-generation, and energy-sector environments.

### INDUSTRIAL & MANUFACTURING

Engineering and execution works across factories, production facilities, processing plants, warehouses and industrial support areas .

### REAL ESTATE & NEW DEVELOPMENTS

Construction and development works across residential, commercial, and mixed-use projects including major new developments .

### HEALTHCARE & PHARMACEUTICAL

Construction, rehabilitation, and facility-upgrade works across healthcare and pharmaceutical environments .

### COMMERCIAL, CORPORATE & ADMINISTRATIVE

Projects across administrative buildings, corporate facilities, offices, and operational workplaces .

### HOSPITALITY & TOURISM

Construction, rehabilitation, and upgrade works across hotels, resorts, and tourism developments .

### RETAIL & CHAINS

Branch development, renovation, upgrades, rollout works, and modifications across retail and chain environments .

### GOVERNMENT & INSTITUTIONAL

Engineering and construction works for governmental, public, banking, and institutional entities.

### EMERGING GROWTH ZONES

ElNada is positioned to support new developments across Egypt's expanding industrial, commercial, healthcare, hospitality and real estate growth areas.

# OUR CAPABILITIES

MOST PROJECTS ARE DIVIDED BY TRADE. ELNADA STARTS WITH THE PROBLEM

---

We bring construction, civil, electromechanical, structural, pipeline, and industrial capabilities into one coordinated model — so each project is approached as one connected system, not a collection of disconnected packages.

## CONSTRUCTION & CIVIL WORKS

Complete construction and civil works for new buildings and facilities, coordinated across structural, architectural, and supporting disciplines from the outset.

## STRUCTURAL REHABILITATION & STRENGTHENING

Repair, strengthening, restructuring, and rehabilitation of existing structures, developed around their actual condition, load requirements and required performance.

## ELECTROMECHANICAL, STEEL & INDUSTRIAL WORKS

Integrated electrical, mechanical, steel, equipment, and industrial works coordinated around the technical and operational demands of each facility.

## OIL & GAS PIPELINE WORKS

Underground pipeline works covering excavation, supply, installation, welding, testing, and backfilling for oil and gas infrastructure projects.

## BUILDING UPGRADES, RENOVATION & FIT-OUT

Renovation, modernization, fit-out, and facility upgrades developed around the actual condition and operational requirements of existing buildings.

## FIRE ALARM & FIRE FIGHTING SYSTEMS

Fire alarm and firefighting systems delivered as part of ElNada's integrated electromechanical works across different project environments.

# STRUCTURAL REHABILITATION & STRENGTHENING

WHEN EXISTING STRUCTURES DEMAND A DIFFERENT ENGINEERING RESPONSE

---

## ■ STRUCTURAL REPAIR

Targeted repair of damaged or deteriorated structural elements to restore integrity and performance.

## ■ STRUCTURAL STRENGTHENING & RESTRUCTURING

Strengthening or modifying beams, columns, slabs, and other structural elements to meet changing load or performance requirements.

## ■ BUILDING & FACILITY REHABILITATION

Coordinated structural rehabilitation of existing buildings and facilities where multiple elements require repair, reinforcement, or performance recovery.

## ■ SPECIALIZED STRUCTURAL INTERVENTIONS

Project-specific structural works including vibration treatment, heavy-load support, and other non-standard engineering interventions.

## SELECTED STRUCTURAL REHABILITATION EXPERIENCE

DIFFERENT STRUCTURES. DIFFERENT CHALLENGES. ONE ENGINEERING STANDARD

---

### INSTITUTIONAL & PUBLIC SECTOR

CENTRAL BANK OF EGYPT

Money Printing House

Specialized structural intervention and vibration-treatment works.

### HEALTHCARE & PHARMACEUTICAL

IBN SINA PHARMA

El Sawah Warehouse — Cairo

Repair and strengthening of the existing warehouse roof-truss system.

### INDUSTRIAL & MANUFACTURING

AL AMIR CERAMICS

Structural Column Restructuring & Strengthening

Restructuring and strengthening of existing structural columns within an industrial facility.

### POWER & UTILITIES

CAIRO ELECTRICITY PRODUCTION COMPANY

South Cairo Steam Power Station

Structural repair and rehabilitation works to basement ceiling and ground-level structural elements.

## **ELECTROMECHANICAL, STEEL & INDUSTRIAL WORKS**

### **ENGINEERED FOR OPERATING ENVIRONMENTS**

---

#### **■ ELECTRICAL & POWER SYSTEMS**

Transformers, electrical panels, MCC rooms, and associated electrical works.

#### **■ MECHANICAL & EQUIPMENT INSTALLATION**

Installation, relocation, modification, and integration of industrial equipment and mechanical systems.

#### **■ STEEL STRUCTURES & METAL WORKS**

Fabrication, installation, modification, and strengthening of steel structures, supports, and industrial metal works.

#### **■ INDUSTRIAL PROTECTION & SPECIALIZED WORKS**

Cladding, thermal insulation, treated flooring, and other project-specific works within industrial facilities.

## **SELECTED ELECTROMECHANICAL & INDUSTRIAL EXPERIENCE**

### **FROM POWER SYSTEMS TO PRODUCTION EQUIPMENT DELIVERED ACROSS DIFFERENT INDUSTRIAL ENVIRONMENTS**

---

#### ■ **POWER GENERATION FACILITY – WEST POWER STATION**

Installation of transformers, electrical panels, and MCC rooms .

#### ■ **MULTIDISCIPLINARY INDUSTRIAL PROJECT – ELMACO**

Integrated construction, electrical, mechanical, and supporting engineering works delivered within a complete project scope .

#### **PRODUCTION FACILITY, MULTIPLE SCOPES EGYPTIAN SUGAR & INTEGRATED INDUSTRIES COMPANY**

##### ■ **Production Equipment**

Installation, relocation, and modification of tanks and production equipment .

##### ■ **Cooling Tower Systems**

Mechanical, steel, and supporting works associated with cooling tower installations .

##### ■ **Pumps & Equipment Systems**

Installation and relocation of pumps, equipment, and associated supporting structures .

##### ■ **Industrial Steel Works**

Steel structures, equipment supports, pipe supports, cladding, and related metal works across production and service facilities .

##### ■ **Treated Industrial Flooring – 12,800M<sup>2</sup>**

Supply and installation of treated flooring across factory streets, workshops, and operational areas .

##### ■ **Additional Treated Flooring Experience**

Ibn Sina Pharma and The World of Modern Furniture .

## CONSTRUCTION & CIVIL WORKS

### FROM FIRST WORKS TO FINAL DELIVERY

---

ELNADA UNDERTAKES COMPLETE CONSTRUCTION SCOPES, COORDINATING CIVIL, STRUCTURAL ARCHITECTURAL, ELECTROMECHANICAL, AND FINISHING REQUIREMENTS AS ONE CONNECTED PROJECT RATHER THAN SEPARATE PACKAGES.

#### ■ COMPLETE BUILDING DELIVERY

Execution of complete new-build projects across different building types and operating requirements.

#### ■ CIVIL & STRUCTURAL WORKS

Foundations, concrete works, structural systems, and associated civil works forming the core of the project

#### ■ MULTIDISCIPLINARY COORDINATION

Construction, electromechanical, architectural, and supporting disciplines coordinated under one project management structure.

#### ■ PROJECT-TO-HANDOVER RESPONSIBILITY

A continuous line of responsibility from site execution and coordination through completion and final handover.

**ONE PROJECT. ONE COORDINATED DELIVERY**

## DELIVERY AT SCALE

THE SAME STANDARD IN EVERY ONE

---

**22,000 M<sup>2</sup>**

### IBN SINA PHARMA — PHARMACEUTICAL WAREHOUSE

13m Clear Height · Turnkey Delivery

Complete delivery covering civil works, structural steel, architectural finishes, HVAC, electrical systems, fire protection, pharmaceutical cold storage, infrastructure, external works, and industrial flooring

**Completed · Tested · Commissioned · Handed Over**

## INTEGRATED REHABILITATION

### EL NASR COMPANY FOR STEEL PIPES & FITTINGS

Administrative and industrial facility rehabilitation covering

Structural Strengthening · Foundation Reinforcement · Civil & Architectural Works.

Electrical & Low-Current Systems · Mechanical Works · Fire Protection.

Industrial Flooring · Infrastructure & Site Development.

## MULTI-SITE EXECUTION

### PROJECT HASSAN ALLAM

Damanhour · Damietta · Qalyub · Ismailia · Salah Salem · Imbaba · Shebin El Kom

Tanta · New Qalyub · Mohandessin · El Sawah

Scopes included steel structures, concrete buildings, administrative buildings warehouses, flooring, and branch construction works

## CLIENTS & CONSULTANTS

## ENGINEERING & CONSULTING EXPERTISE ACROSS OUR PROJECTS

# THE STANDARD BEHIND THE STRUCTURE

# CASE STUDY ----- GASCO

MULTIPLE SCOPES. ONE OIL & GAS ENVIRONMENT

---

## THE CHALLENGE

The GASCO facility, located close to the sea, was experiencing severe groundwater ingress whenever sea levels rose, causing large quantities of water to emerge through the ground.

## THE ENGINEERING RESPONSE

ElNada delivered multiple scopes within the GASCO project environment, covering works across the administrative building, industrial hangar, factory facilities, boundary wall renovation, and underground supply lines.

The scope brought together building, industrial, renovation, and underground infrastructure works within the same oil & gas environment.

## THE OUTCOME

The project demonstrates ElNada's ability to execute and coordinate different work packages for a major oil & gas client within one project environment.

## KEY PROOF

COASTAL GROUNDWATER INGRESS

Severe water intrusion linked to rising sea levels

GROUND TREATMENT

Corrective ground and subsurface works

FULLY RESOLVED

Recurring water ingress eliminated after intervention

# CASE STUDY----- ARMANT SUGAR FACTORY

FROM 0.5 MW TO 4 MW — RE-ENGINEERING THE STRUCTURE AROUND THE TURBINE

## THE CHALLENGE

During the 1992 sugar season, the factory required its turbine capacity to increase from 0.5 MW to 4 MW — eight times the original capacity.

The challenge extended beyond the turbine itself. The surrounding structure had to be adapted to accommodate equipment of a substantially different capacity and configuration.

ElNada was the only Egyptian company invited to propose a solution, competing alongside the Czech turbine manufacturer.

## THE ENGINEERING RESPONSE

ElNada developed an engineering solution that modified both the turbine-supporting structure and elements of the machinery.

The works included forming 100 mm diameter holes at a depth of 1200 mm within the main concrete structure, together with modifications to the turbine machinery and the manufacture of purpose-built pipes and connections.

## THE OUTCOME

The project was delivered at %20 of the competitor's proposed cost and completed within 15 days, with work continuing around the clock.

## KEY PROOF

MW 0.5 - 4  
Capacity ×8

# CASE STUDY----- SUGAR REFINERY FACTORY EXPLOSION

WHEN REPLACEMENT WAS THE OBVIOUS ANSWER, WE ENGINEERED ANOTHER ONE

---

## THE CHALLENGE

Following an explosion in 2000, crystal-sugar pipelines became blocked with burnt carbonized sugar.

The pipes measured only 5 cm in diameter while extending approximately 1400 cm in length, and no suitable equipment was available locally to clear the obstruction

Replacing the affected lines was possible, but would have resulted in significant cost and production delay.

## THE ENGINEERING RESPONSE

Instead of replacing the pipelines, ElNada developed custom-made drill bits specifically designed to enter the narrow pipes and remove the blockage without damaging the existing lines.

## THE OUTCOME

The solution successfully cleared the affected pipelines while avoiding full replacement reducing both project cost and production downtime.

## KEY PROOF

cm 5

Pipe Diameter

Pipe Length

CUSTOM-MADE TOOLING

Developed Specifically for the Intervention

# CASE STUDY----- NILE WATER EXTRACTION

USING THE RIVER CURRENT AS PART OF THE ENGINEERING SOLUTION

---

## THE CHALLENGE

In 2008 , ElNada was faced with a technically demanding water-extraction project involving engineering, hydrology, fabrication, and project management metres into the River Nile 80 The required extraction point was located Underwater welding offered one possible solution, but at significant cost. Floating and positioning the pipe offered a more economical approach, but introduced a much more complex hydrological and installation challenge .

## THE ENGINEERING RESPONSE

ElNada carried out the necessary hydrology calculations and manufactured an 80-metre pipe weighing 14 tons and measuring 60 cm in diameter.

The installation approach was designed to use the Nile current itself as part of the positioning process, allowing the pipe to reach the required extraction point .

## THE OUTCOME

The calculations and installation strategy enabled the extraction pipe to reach its intended position and perform the required water-extraction function .

## KEY PROOF

# CASE STUDY ----- AL AMIR CERAMICS

STABILIZING A CRITICAL INDUSTRIAL STRUCTURE WITHOUT STOPPING OPERATIONS

---

## THE CHALLENGE

A large tower structure associated with the factory's conveyor system had become unstable and was at risk of collapse.

The intervention had to be carried out while the factory remained fully operational requiring the structural works to be planned around ongoing production activities.

## THE ENGINEERING RESPONSE

ElNada carried out the required structural strengthening and stabilization works to restore the safety and stability of the existing tower structure.

The intervention was developed around the actual condition of the existing structure and executed while maintaining normal factory operations throughout the works.

## THE OUTCOME

The tower structure was successfully stabilized and the required strengthening works were completed in approximately two months.

The factory continued operating normally throughout the intervention, allowing the structural problem to be resolved without interrupting ongoing production.

## KEY PROOF

CRITICAL STRUCTURAL STABILIZATION

APPROX. 2 MONTHS

FACTORY REMAINED OPERATIONAL

# CASE STUDY ----- MIRETTE HOTEL, HURGHADA

LARGE-SCALE REHABILITATION ACROSS 11 BUILDINGS

---

## THE CHALLENGE

Mirette Hotel in Hurghada required a major rehabilitation program across 11 buildings, with limited time available for execution

Approximately 1200 structural pillars required repair across the development, creating a large-scale coordination and rehabilitation challenge

## THE ENGINEERING RESPONSE

ElNada organized and executed the rehabilitation program across the multiple buildings coordinating the required pillar-repair and maintenance works as one integrated intervention

## THE OUTCOME

The rehabilitation program was successfully delivered, restoring the affected buildings and significantly improving their overall condition

## KEY PROOF

11 BUILDINGS

PILLARS 1,200~

Requiring Repair

MULTI-BUILDING REHABILITATION

# CASE STUDY ----- LARGE MOSQUE , 6 TH OF OCTOBER

## LANDMARK-SCALE CONSTRUCTION WITHOUT TOWER CRANES OR CONCRETE PUMPS

---

### THE CHALLENGE

In 2009 , ElNada was commissioned to construct a mosque on a 4,500 m<sup>2</sup> site near Vodafone Square in 6th of October City.

The scale of the architectural elements presented a significant execution challenge particularly because the structure had to be ,delivered without the use of tower cranes or concrete pumps.

The dome alone reached 40 metres in height, measured 20 metres in diameter and covered approximately 600 m<sup>2</sup>.

### THE ENGINEERING RESPONSE

ElNada developed an execution approach in which the dome was manufactured in smaller sections and progressively assembled and welded during construction

This allowed the team to execute the large architectural structure while working within the available equipment and site conditions

### THE OUTCOME

The project was successfully completed and, at the time of completion, became the largest mosque in modern Egypt

### KEY PROOF

# CASE STUDY----- SOUTH CAIRO ELECTRICITY

RESTORING A CRITICAL STRUCTURE AFTER A 350 MW TURBINE EXPLOSION

---

## THE CHALLENGE

An explosion involving a 350 MW turbine caused major damage to the turbine's concrete base and surrounding structural pillars.

The damaged structure had to be rehabilitated to accommodate the replacement turbine within a critical power-generation environment.

## THE ENGINEERING RESPONSE

ElNada repaired and rehabilitated the damaged structural elements surrounding the turbine base, preparing the existing structure to safely support the new turbine

The intervention combined structural rehabilitation with strict control of execution time and cost.

## THE OUTCOME

The project was completed within one month and delivered with the required approvals from Suez Canal University, PEGASCO, and the Ministry of Electricity .
